A Fast, Flexible and Intelligent Solution From 50 L up to 3,000 L

Building on 20 years of experience in designing singleuse fluid management solutions, we have established Pre-designed Solutions (PDS) for all process steps where either powerful or low shear mixing performances are required.

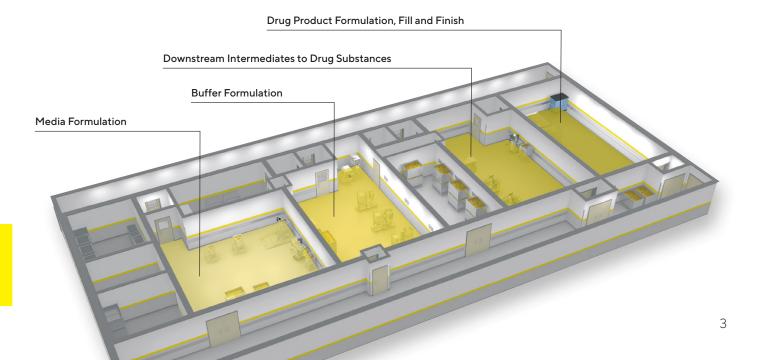

The Flexsafe[®] Pro Mixer is a unique, single-use mixer that can accommodate a wide range of mixing steps in both upstream and downstream processes.

Flexsafe® Pro Mixer consists of three main components:

- Flexsafe[®] Pro Mixer Bag
- Palletank for Mixing
- Pro Mixer drive unit

Flexsafe[®] Pro Mixer technology combines speed and efficiency to deliver high performance mixing during powder dissolution and a levitating impeller to preserve the drug during low shear blending applications:

- Its strong vertical vortex combined with a baffle effect and cubical tank design enables instant downward movement and the efficient dissolution of floating powders such as media.
- Its high torque facilitates the efficient mixing of high concentration or viscous powders such as buffers.
- Its levitating impeller eliminates the shear effects that can impact product quality and prevents the generation of aggregates and particles that can reduce filtration performance.
- Low shear mixing combined with a high torque allows the homogenization, viral inactivation and formulation of sensitive drug substances and products

When you select a Flexsafe® Pro Mixer PDS, you get the simpler, safer, faster and cheaper supply chain solutions.

Media Formulation Pre-designed Solutions for media formulation

Drug Product Formulation Pre-designed Solutions for drug product formulation

Buffer Formulation Pre-designed Solutions for buffer formulation

Downstream Intermediates Pre-designed Solutions for downstream intermediates

Assurance of Supply for All Fluid-contact Components

Component Quality and Change Control

Fluid-contact components used for Flexsafe® Pro Mixer PDS are secured by long term contracts and quality agreements to offer the best assurance of supply. Our supply contracts and quality agreements ensure at least a 24-month change notification on fluid-contact components thus providing robust change control and business continuity.

Fluid-contact components are also available off-the-shelf to offer the best delivery ability.

Design Qualification

Component designs are selected to maximize tubing engagement tensile strength and tightness. Test samples are visually inspected for absence of defect and tested for leak, burst pressure, traction and compression.

Material Qualification

Flexsafe® Pro Mixer PDS components are evaluated for conformity against the EP and USP standards after reviewing technical documentation and certificates of quality available from our suppliers.

Additional internal qualification tests are performed to establish extractable profiles, post gamma sterilization shelf life and consistent functional properties.

Critoria for Component Poference

Selection	Reference
Biological safety (USP Class VI)	USP<87> & USP<88>
TSE-BSE questionnaire	Compliance with EMA/410/01 and E.P 5.2.8
Endotoxin	USP<85> or EP 2.6.14
Bioburden	ISO 11737
Sub visible particles	USP<788> or EP 2.9.19
Others	Bisphenol A free, REACH compliance

Our core expertise in plastics and polymers enables the selection of the cleanest and most inert materials to minimize chemical interactions with biopharmaceutical fluids, and leacheable substances.

Flexsafe® Pro Mixer PDS

Drain valve	Yes	Yes

Using a Flexsafe[®] Pro Mixer Pre-designed Solution in all your process steps provide you with the best quality, change control, business continuity and delivery performances.

Validation and Quality Assurance

Flexsafe[®] Pro Mixer PDS are qualified against extensive biological, chemical, physical, extractable and functional testing.

Sartorius Stedim Biotech Quality Systems for single-use products follow applicable ISO 9001 standard. Design, manufacture, quality control and sterilization of PDS are conducted under conditions that mirror biopharmaceutical operations and meet cGMP like requirements to ensure they are supplied clean, pure, non-pyrogenic fluidpath and sterile.

PDS are validated and routinely controlled to provide consistent performance for:

Robustness

- Internal standardized methods for connection tests and functional qualification in real process conditions
- ASTM D882, ASTM D3787, F392 for tensile properties, resistance to puncture and flex durability

Gas Transmission (Film)

 ASTM F3985, ISO 15106-3, ASTM F2476: Oxygen, Water Vapor Transmission Rate and Carbon Dioxide.

Biocompatibility and Chemical Compatibility

- USP<87>: Biological reactivity tests, in Vitro
- USP<88>: Biological reactivity tests, in Vivo
- USP<661> and EP 3.1.5: Containers, physico-chemical tests – Plastics
- ASTM D543-06: resistance of plastic to chemical reagents

Purity, Extractable and Leachable

- Extractable data
- TSE/BSE: EP 5.2.8

Cleanliness, Particles and Sterilization

- USP<788> and EP 2.9.19:
- Particulate Matter in Injections Endotoxin
- Visible particles: Representative product has been analyzed for particles with sizes ≥100 µm according to internally developed and validated method. Results are monitored
- USP<85> and E.P. 2.6.14: Bacterial endotoxins Sterility
- ISO 11737 Sterilization of medical
- ISO 11137 Sterilization by irradiation of
- Medical Devices: Sterilization of Medical Devices
- ISO 14644: Cleanroom environmental controls
- Gamma radiation dose mapping ISO 11137 Sterilization by irradiation of Medical Devices: Sterilization of Medical Devices

PDS for media, buffer, harvest & downstream intermediates and drug substance process steps are released on the basis of a weekly quality control for bioburden, sub-visible particulates and endotoxin performed on representative samples.

Assurance of Single-Use System Integrity

The assurance of container closure integrity of Flexsafe® Pro Mixer bags is proven along the entire product life cycle. Quality by design principles, process gualification, process control and quality control first ensure integrity of the film, the welds, and the bag chamber.

A Supplier Integrity Test (SIT) for the complete bag and line assemblies is available for Flexsafe® Pro Mixer Bags up to 650 L, thus providing the best integrity assurance of the industry, mainly for critical applications.

For those critical process steps, a 100% point-of-use leak test avoids the risk of losing high value product and enhances patient and operator safety by ensuring that no damage occurred during shipping, storage, and handling of single-use Flexsafe® Pro Mixer bags at the user site.

Supplier Integrity Test

Point of Use-Leak Test

A supplier integrity test with Helium technology for 2 µm sensitivity is available for Flexsafe® Pro Mixer bags, from 50 to 650 L, and under a defined mixing bags design space.

A Point-of-Use Leak Test using pressure decay is available for end-users to test Flexsafe[®] Mixing bags from 50 L to 1,000 L in a fast and reliable way with the Sartocheck[®] 4 plus Bag tester.

These tests in conjunction with the control of our process ensure the strongest level of Integrity and safety for patients and operators.

The Fast, Flexible and Intelligent Solution for All Mixing Steps in cGMP Bioprocessing

The Flexible and Ergonomic Design of the Flexsafe® Pro Mixer 50-3,000 L Offers Ease of Use:

The Flexsafe® Pro Mixer Bag (50–1,000 L) contains a central magnetic impeller assembly. Its unique sided K-weld design simplifies installation and facilitates the unfolding and folding of the bag during filling and draining operations. The 8" diameter top port allows easy and contained powder transfer into the mixing bag during buffer and media applications.

The Flexsafe® Pro Mixer Bag (1,500 to 3,000 L) contains an off-center magnetic impeller assembly and a 4" top port for powder transfer. Its bottom and top K-welds, combined with the Palletank lifting system, facilitates bag installation as well as filling and emptying operations.

The positioning of the tubing lines and sensors allow for easy installation and direct access during filling, sampling and draining.

The Flexsafe[®] Pro Mixer bag and Palletank are designed for easy product handling and quick-started processing just a few minutes after installation.

The drive unit touchscreen guides users from bag installation to the end of the mixing run with simple-to-follow instructions for each stage of the process.

Front door and cubical shape for an easy bag installation

Front access to sensors and tubing for easy manipulation

8 inches top opening for easy powder addition

Intelligent Mixing for Your cGMP Biomanufacturing

The Flexsafe[®] Pro Mixer provides the high levels of control that are essential for cGMP biomanufacturing:

- Inline control and monitoring of pH, conductivity and temperature are performed with a preassembled single-use pH probe, conductivity sensor and thermowell.
- Inline sensors meet PAT and cGMP requirements, eliminate the risk of contamination associated with reusable probes and reduce operator time.
- Palletank for Intelligent Mixers are available with weighing functions and heat exchange jackets for integrated volume and temperature control.
- The Pro Mixer drive unit features automated control, monitors the impeller speed, offers mixing recipes and includes password management.

From left to right: sampling line, thermowell, pH sensor, conductivity sensor

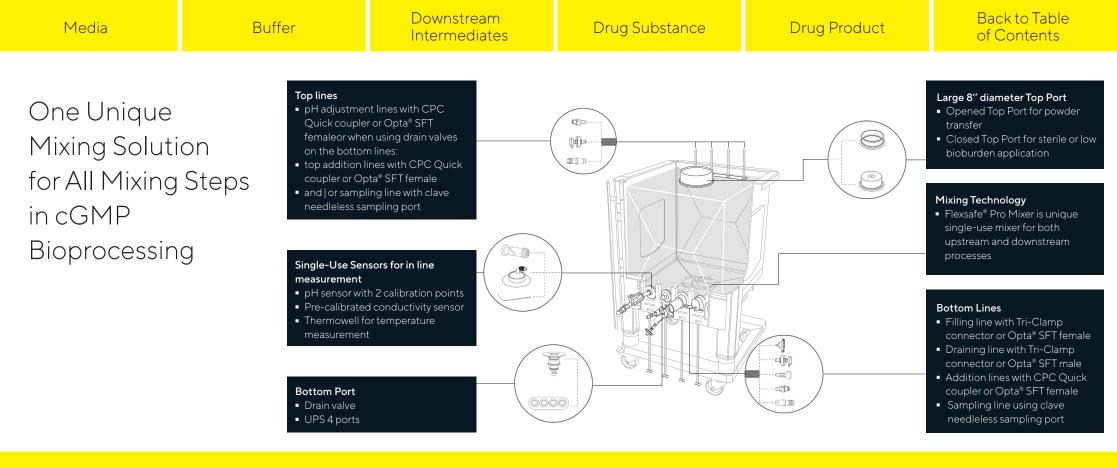

Heat exchange jacket and temperature control

Weight control (Picture of one load cell)

Pro Mixer Drive unit touchscreen

Inlet and Outlet Connectors

- Tri-Clamp 1½" sanitary flange are used for either sanitary connection or aseptic connection under ISO5 laminar air flow to stainless steel systems
- CPC quick couplers are used for either sanitary connection or aseptic connection under ISO5 laminar air flow to single-use systems
- Opta[®] SFT Female enables sterile connections to other single-use systems
- Clave needleless sampling port enables sterile sampling

Tubes

- TuFlux[®] Silicone tubing enables safe and fast pumping
- TuFlux[®] TPE tubing allows for sterile weld connection with BioWelder[®] TC and sterile seal disconnection with BioSealer[®]

Sensors

Single-use pH sensor:

- Electrochemical pH electrode with integrated Pt-1000
- Pre-installed and pre-sterilized single-use pH sensor
- Large measurement range pH2-pH11, 4-50°C
- High accuracy after 2 points calibration: pH2-pH11: ±0.08
- Retractable probe: 3 activations (insertion-removal-insertion) validated with maintained sterility

Single-use conductivity sensor:

- Pre-installed and pre-sterilized single-use conductivity sensor
- Pre-calibrated single-use conductivity sensor and ready to use
- Large measurement range 100µS/cm up to 200 mS/cm
- Accuracy:
 <100 mS/cm: 3%
 100 200 mS/cm: 5%

Thermowell:

• Compatible with reusable temperature probe of 3 mm diameter

Media Formulati	on	Thermov	vell			
		No sense	or			

Flexsafe® Pro Mixer technology combines speed and efficiency to deliver high performance mixing during powder dissolution such as media powder.

An optimized media formulation process involves filling the mixer with water for injection (WFI) up to 60% to 80% of the final volume. WFI can be heated up with the heat exchange jacket to accelerate the dissolution. The mixing drive unit is started and the media powder or a concentrated liquid media is added during mixing.

Once the dissolution is complete, WFI is added to adjust to the final volume. Volume adjustment can be automatically performed using weighing control.

Temperature and pH can be monitored and adjusted inline. Process samples are taken off-line for other QC tests.

When the formulation is complete, the media is filtered for sterilization and mycoplasma removal and stored before further transfer to the bioreactor. Flexsafe® Pro Mixer PDS for media are available in:

• Intelligent version using single-use and integrated sensors for

in-line pH and temperature monitoring and adjustment required for your cGMP biomanufacture.

• Without sensor using either reusable sensors via the 8" top opening for in-line controls or sampling in single-use bags for off-line controls.

Filling and draining lines are available with TuFlux® Silicone tubing and Tri-Clamp 1½" sanitary flange. Samples can be taken via an additional TuFlux® Silicone line equipped with a clave needleless sampling port.

The following options are also available:

- Lines for other liquid additions with TuFlux[®] Silicone tubing and quick coupler connector.
- Drain valves to prevent powder accumulation in bottom tubing lines.

Flexsafe[®] Pro Mixer technology combines speed and efficiency to deliver high performance mixing during powder dissolution such as buffer powder.

An optimized buffer formulation process involves filling the mixer with water for injection (WFI) up to 60% to 80% of the final volume. WFI can be heated up with the heat exchange jacket to accelerate the dissolution. The mixing drive unit is started and the buffer powder or a concentrated liquid buffer is added during mixing.

Once the dissolution is complete, WFI is added to adjust to the final volume. Volume adjustment can be automatically performed using weighing control.

Temperature, conductivity, and pH can be monitored and adjusted in-line. Process samples are taken off-line for other QC tests.

When the formulation is complete, the

buffer is sterile filtered and stored before further use for drug substance purification or final drug product formulation.

Flexsafe® Pro Mixer PDS for buffer are available in:

- Intelligent version using single-use and integrated sensors for in-line pH, conductivity and temperature monitoring and adjustment required for your cGMP biomanufacture.
- Without sensor using either reusable sensors via the 8" top opening for in-line controls or sampling in single-use bags for off-line controls.

Filling and draining lines are available with TuFlux[®] Silicone tubing and Tri-Clamp 1½" sanitary flange. Samples can be taken via TuFlux[®] Silicone line equiped with a clave needleless sampling port.

The following options are also available:

- Lines for liquid additions with TuFlux® Silicone tubing and quick coupler connector.
- Drain valves to prevent powder accumulation in bottom mounted tubing.

Downstream Intermediates

pH sensor & Thermowell

Thermowell

Flexsafe® Pro Mixer technology allows low shear mixing to preserve the drug during viral inactivation. PDS are designed with single-use sensors for safe and reliable use along the process steps.

Low pH viral inactivation of downstream process intermediates consists of 3 steps:

The pH of the downstream intermediate is first reduced and maintained at low pH for a validated period of time, usually at pH 3-4 for an hour, until the virus is totally inactivated. The low pH inactivation is followed by a neutralisation step where the pH is increased, usually up to pH 7-8 and a final filtration.

All three steps require mixing for inactivation, neutralization and homogenization.

To ensure that the entire content of the first mixer is inactivated, including droplets on the mixer wall or dead

volume inside tubing, some processes are operated using 3 single-use mixing bags:

- 1 for low pH viral inactivation
- 1 for neutralisation

• 1 for homogenization of the filtered drug substance. Some processes are operated with two single-use mixing bags by combining the 2 mixing steps, low pH inactivation and neutralisation, into the same single-use mixing bag.

PDS for Low pH virus inactivation and neutralisation are designed with:

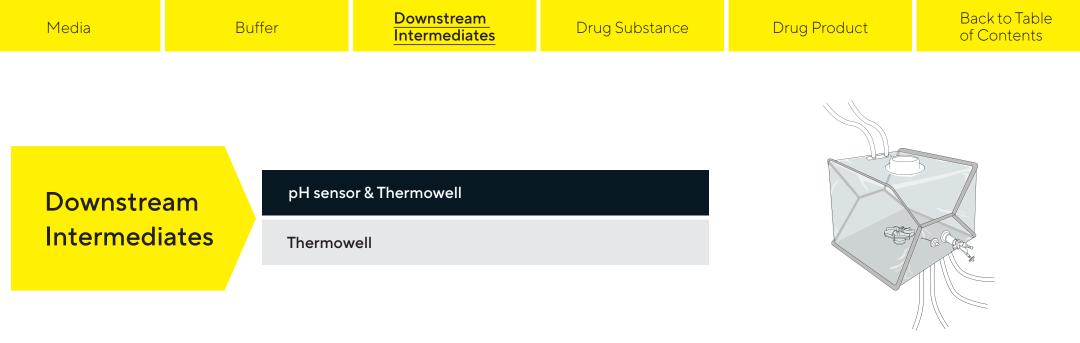

- Fully closed 8" diameter top port for a safe mixing.
- Integrated single-use pH sensor and thermowell for inline monitoring and control of the inactivation process.
- Top lines with TuFlux[®] Silicone tubing and quick coupler connector for pH adjustment.
- Bottom lines with TuFlux[®] Silicone tubing and Tri-Clamp 1½" sanitary flange for filling and draining.
- Bottom lines with TuFlux[®] Silicone tubing and clave needleless port for sterile sampling.

The following options are also available:

- Lines for other liquid additions with TuFlux[®] Silicone tubing and quick coupler connector.
- Drain valves to avoid hold up volumes into the tubes.

PDS for post filtration are designed with:

- Integrated thermowell for temperature monitoring and control.
- A combined TuFlux[®] Silicone + TuFlux[®] TPE tubing ended by an Opta[®] SFT female to allow sterile connection and disconnection of the adequate filter line.
- A combined TuFlux[®] Silicone + TuFlux[®] TPE tubing ended by a Tri-Clamp 1¹/₂" sanitary flange for draining.
- Bottom line with TuFlux[®] Silicone tubing and clave needleless port for sterile sampling.
- Bottom line with TuFlux[®] Silicone tubing and quick coupler connector for liquid additions.

Drug Substance Purification

pH sensor & Thermowell

Thermowell

Flexsafe® Pro Mixer features a levitating impeller to preserve the drug substance during low shear blending applications. PDS are designed with single-use sensors for safe and reliable use along the process steps.

Process samples are taken off-line for other QC tests such as product quality attributes and bioburden prior to sterile filtration.

The Opta[®] SFT connector or the BioWelder[®] TC are used for respectively sterile connection or sterile weld.

Tri-Clamp or quick coupler connectors are used for aseptic connections under ISO laminar air flow.

Sterile disconnection is done using the BioSealer® TC.

PDS for mixing during drug substance purification are designed for

 Aseptic filling and draining operations under ISO laminar air flow:

bottom lines with TuFlux® Silicone tubing and Tri-Clamp 1½" sanitary flange.

- Integrated single-use pH sensor and | or thermowell for in-line monitoring and control.
- Top lines with TuFlux[®] Silicone tubing and quick coupler connector for pH adjustment.
- Bottom line with TuFlux[®] Silicone tubing and clave needleless port for sampling.
- Bottom lines with TuFlux[®] Silicone tubing and quick coupler connector for liquid additions.
- Fully closed 8" diameter top port for a safe mixing.

Drug Product Formulation

pH sensor & Thermowell

No sensor & with sterile connections and disconnections

No sensor & with aseptic connections and disconnections under ISO laminar air flow

Flexsafe® Pro Mixer features a levitating impeller to preserve the drug product during final formulation. PDS are designed with single-use sensors for safe and reliable use along the process steps.

The drug product formulation involves a mixing step where the product is formulated before final filtration, fill and finish in its final container.

During this step, the drug substance is mixed with other buffers and excipents to obtain the final drug product concentration and composition.

pH is monitored and | or adjusted in-line and samples are taken off-line for other QC tests such as product quality attributes and bioburden prior to sterile filtration.

Flexsafe[®] Pro Mixer PDS for final formulation are available in:

- With single-use and integrated sensors for in-line pH and temperature monitoring and adjustment required for your cGMP biomanufacture.
- Without single-use sensors where sterile samples are taken for off-line controls.

PDS are designed for either sterile or aseptic connections and disconnections.

The Opta[®] SFT connector or the BioWelder[®] TC are used for respectively sterile connection or sterile weld.

Tri-Clamp or quick coupler connectors are used for aseptic connections under ISO laminar air flow.

Sterile disconnection is done using the BioSealer® TC.

Intelligent PDS for final formulation are designed with:

- Bottom lines with a combined TuFlux[®]
 Silicone + TuFlux[®] TPE tubing ended by an Opta[®] SFT connector to allow pumping and sterile weld and | or seal
- Integrated single-use pH sensor and thermo-well for in-line monitoring and control
- Top lines with TuFlux[®] Silicone tubing and Opta[®] SFT connector for sterile pH adjustment
- Bottom line with TuFlux[®] Silicone tubing and clave needleless port for sterile sampling
- Bottom or top line with TuFlux[®] Silicone tubing and Opta[®] SFT connector for sterile liquid additions
- Fully closed 8" diameter top port for sterile mixing

Flexsafe[®] Pro Mixer PDS without sensor for final formulation are designed for:

- Aseptic operations under ISO laminar air flow:
- filling and draining lines with TuFlux[®] Silicone tubing and Tri-Clamp 1½" sanitary flange
- additions and pH adjustment lines with TuFlux[®] Silicone tubing and quick coupler connector
- sampling line with TuFlux[®] tubing and clave needleless port
- For sterile operations:
- filling and draining lines with a combined TuFlux[®]
 Silicone and TuFlux[®] TPE tubing ended by an Opta[®]
 SFT connector
- pH adjustement top lines with TuFlux[®] Silicone tubing ended by Opta[®] SFT connector
- sampling line with a clave needleless port
- liquid addition lines with TuFlux[®] Silicone tubing ended by Opta[®] SFT connector
- Fully closed 8" diameter top port for sterile mixing.

Options with drain valves to avoid hold up volumes into the tubes are also available.

Palletank for Mixing with Weighing

Palletank for Mixing with Weighing

Description	Technical Specification
Scale Indicator	Minebea Combics 1
Material of construction	Stainless Steel 304
Keyboard	6 keys
Display	14 segments
20 mm weight readout	650 L
Interface	RS232
IP protection rate	IP69K
Operating temperature range	-10°C to 40°C
Integrated load cells	Weighing module Minebea Novego
Material of construction	304 and 4418 (sensor)
IP protection rate	IP68 + IP69
Overload	High overload protection
Vibration resistance	Resistance against oscillations (IEC 68-2-6 Fc); 20g, 100h, 10 to 150 Hz
Design	In accordance with European Hygienic Engineering and Design Group (EHEDG) guidelines
Lift-off	Lift-off protector and anti-wobbling mechanism

Palletank for Mixing Jacketed

Palletank Jacketed

Description		Technical Specification	
		Version: PED (for Europe, Asia and NEMA)	Version: ASME (for North America)
Operating temperature	50 L to 3,000 L	0°C to 50°C	
Working pressure	50 L to 3,000 L	-1 to 6 bars	10 bars
Test pressure	50 L to 3,000 L	9 bars	13 bars
Compliance	50 L to 3,000 L	PED	Heat exchanger ASME certified From heat exchanger: designed and build under ASME code
Insulated	50 L to 3,000 L	On all sides, the bottom and the lids	
Jacketed	50 L and 100 L	4 sides and bottom	
	200 L to 1,000 L	3 sides and bottom	
	1,500 L to 3,000 L	3 sides and bottom for 1,500 L base, module and top insulated only	
Inlet outlet of heat transfer fluid 50 L to 3,000 L		Manual ¾ ball valve and ¾ Tri-Clamp Male NPT conne

Hardware

Pro Mixer Drive Unit

Description	Unit	Value
Dimensions (width×length×height)	mm	439×1,242×1,006
Weight	kg	100
Materials		Device surfaces: 316L 1.2 Ra
		Display: Foil coated with polyester foil
		Castors: Polyamide
Mobility		Mounted on stainless cart with four clean room wheels and push handle
Initial set-up time		Not applicable
Speed of the impeller	rpm	20-750
Maximum speed allowed (rpm)	rpm	■ 50–1,000 L: 750 ■ 1,500–3,000 L: 500
Working Temperature	°C	+2-+30
Relative humidity, maximum (at temperatures of up to 31 °C)	%	80
Protection class according to IEC 60529: HMI handle		IP 23
Protection class according to IEC 60529: electrical cabinet		IP 54
Voltage	VAC	100-240 ±10 %
Frequency	Hz	50-60
Performance (Current consumption), maximum	W	1200
Length of the power supply cable	m	10
Acoustic pressure level, max.	dB (A)	60
Operating Modes		Local operation (Manual, Recipe) Remote Operation
Remote Operation	V	0-10 Input signals from remote control
	mA	4-20 Output signals of the device in remote operation
Remote Operation (Available functions)		 Motor - start, stop Speed - adjustment, indication Alarm - indication Mode of control (remote local) - indication
Type of connection cable for remote operation		8-position, shielded, Plug straight M12, coding: A, on Socket straight M12, coding: A
Recipe storage		25 Number of recipes, max.
		10 Number of phases in the recipe, max.
Compliance		CE UL

Item	Quantity	Part Number
Flexsafe® Pro Mixer Drive Unit*	1	FMD300001
Power supply cable - EU	1	FMA303410
Power supply cable - US	1	FMA303411
Power supply cable - Switzerland	1	FMA303412
Power supply cable - Australia	1	FMA303413
Power supply cable - Great Britain	1	FMA303415
Connection cable for remote operation, length 5 m	1	FMA303416

* the drive unit box includes one power supply cable (EU) and one power supply cable (US)

Powder Transfer Bags

Description	Technical Specifications		
Bag Chamber	Multiple layer film construction, (mLLDPE MDPE-LDPE mLLDPE)		
Fittings	4-inch triclamp		
Accessory	Pinch clamp		
Volumes	15 L and 30 L		
Number of Port	1 port		
Irradiation	25-45 kGy		

Triclamp Reducer

Description	Technical Specifications
Triclamp Reducer	8-inch to 4-inch triclamp reducer with a 4-inch triclamp plug, 4-inch triclamp gasket and 4-inch triclamp union
Material of Construction	Reducer: polyethylene Plug: polyethylene Gasket: platinum cured silicone 4-inch triclamp union: glass reinforced polyamide
Sterility	Non sterile

Cap | Gasket | Union

Description	Technical Specifications	
Cap Gasket Union	4-inch triclamp plug, 4-inch triclamp gasket, 4-inch triclamp union	
Material of Construction	Plug: polyethylene Gasket: platinum cured silicone 4-inch triclamp union: glass reinforced polyamide	
Sterility	Non sterile

Design, Application Development and Validation Services

Design Configuration Options

Should our Pre-designed Solutions need to be adjusted to more specific requirements, they can serve as a base for adjusting

your specific design using our Corporate Configurator and configure to Order (CTO) solutions.

Our Engineered to order (ETO) solutions allows the selection of a larger variety of solutions with added features, lines, manifolds, filters, connectors and sampling systems.

Please contact our sales representatives

and application specialist to support you with the selection and design of your

best solution for your specific process and application.

Application Support

Our expert FMT Application Specialists provide global support for:

- Single-use process URS definitions and application development
- Process design with standard and custom solutions
- Filter selection and sizing optimization study
- SOP development, process validation and operator training
- Technology transfer and process optimization

Validation Service

Our global validation services network offers:

- Installation start up, FAT, IQ & OQ, calibration and maintenance
- Consultancy service and process specific validation studies including
- Extractables | leachables,
- Chemical compatibility
- Bacterial challenge test
- Particle shedding
